Earnings Trader Locked 93 — Input Review Guide

Draft for Bob's review. Nothing here goes to Dick until Bob signs off.

What this is

We measured what this strategy's claim says against what actually happened in the real world. Before you treat any result as final, we want you to check every input we used to get there. Anything you correct re-runs the comparison automatically, and the original value stays visible next to your correction.

Step 1 — The claim document we used

- Files: `trisight-trader EARNINGS_TRADER_LOCKED_93_CONTRACT.md + STRATEGY_SUMMARY.md` and `Audits/2026-07-15_earnings_trader_locked_93_5feacc6/PROOF.md`
- Seal reference: `247c6367`
- Verbatim excerpt: "Events: 93 | Win rate: 92.473% | CAGR: 419.481%"
- Generation/seal date: not stated as a separate field. The audit folder name embeds `2026-07-15` — if that is the actual seal date, confirm it below.

Your review: Is this the right / best statement of what Earnings Trader Locked 93 claims? If a better or newer claim document exists, name the file path.

☐ Confirmed - [] Correction: _____

Step 2 — The numbers we read from the claim

Raw stated value (verbatim): "Events: 93 | Win rate: 92.47% | CAGR: 419.48% | MaxDD: -4.11% | avg trade +7.77% | profit factor 59.43"

- **Events: 93** — not a normalized figure. Per the claim, this is a *selected* set of trades, not every trade the strategy considered.
- **Win rate: 92.47%** — normalized to `0.92473` (92.473%). Plain words: of the 93 selected events, this share was profitable.
- **CAGR: 419.48%** — normalized to `4.19481` (419.481%/yr). Method used: "stated CAGR fraction" — we took the claim's CAGR number as-is and read it as an annual rate.
- **MaxDD: -4.11%** — not separately normalized in our data. Stated as the claim's worst peak-to-trough drop.

- **avg trade: +7.77%** — not separately normalized in our data. Stated as-is.
- **profit factor: 59.43** — not separately normalized in our data. Stated as-is.

Your review: one confirm/correct line per metric —

- Events (93): [] Confirmed [] Correction: _____ | Win rate (92.47%): [] Confirmed [] Correction: _____
- CAGR (419.48%): [] Confirmed [] Correction: _____ | MaxDD (-4.11%): [] Confirmed [] Correction: _____
- Avg trade (+7.77%): [] Confirmed [] Correction: _____ | Profit factor (59.43): [] Confirmed [] Correction: _____

Step 3 — The time window of the claim

Stated window: **2022-03-31 to 2026-05-15**.

Your review: if you know the calendar window this backtest actually covered, and it differs from what's shown, tell us — this single input may change how the CAGR should be read.

☐ Window confirmed as shown - [] Actual window: _____

Step 4 — The realized ledger we used

There is no fills ledger, paper P&L file, or physical log for this strategy anywhere in the estate (status: NOT_FOUND). The document we used to establish that absence:

- **File:** trisight-trader/docs_output/zero_fill_investigation_20260731/ZERO_FILL_INVESTIGATION_20260731.md
- How pulled: not stated
- Pull date: not stated as a separate field (the investigation itself is dated 2026-07-31)
- Row/trade counts: not stated — zero fills were reported
- Window: not stated (no start or end date given for the realized side)

Your review: is this the right investigation to rely on? Does a cleaner or more complete record of real fills exist anywhere? Name it if so.

☐ Confirmed - [] Better ledger: _____

Step 5 — The realized numbers and the known problems with them

Realized metrics: none. Status is NOT_FOUND — no value, no win rate, no window was recorded on the realized side.

Every integrity flag in our data, in plain English:

1. **"93 selected events — selection process undocumented in the claim itself"** (claim side) — nobody stated the rule used to pick these 93 trades out of whatever larger set existed; direction unknown, could be all trades taken or a favorable subset.
2. **"fleet-wide frozen survivor-biased universe (w4nfwu675)"** (claim side) — the pool this claim was tested against was frozen and excludes anything that dropped out before the freeze; biases the claim's numbers optimistic.
3. **"ZERO fills have ever occurred since sealing — investigated and confirmed 2026-07-31"** (realized side) — since this strategy's numbers were locked, not one real trade has filled; not a bias, it means there is no live track record to check the claim against at all.

Your review: per flag — is our reading right? Do you have context that changes it?

Step 6 — What we computed and what we refused

From the inflation report: **REFUSED — missing_data**. "Earnings Trader Locked 93: claim FOUND, realized NOT_FOUND — no comparison without both sides." The report notes: "A refusal is a finding: this claim cannot currently be checked against reality, which is itself the predecessor system's core defect."

One sentence on the input that drove it: the refusal is driven entirely by Step 4/5 — the realized side is NOT_FOUND because zero fills have ever occurred, so there is nothing to compare the claim against.

Your review: dispute the input, not the arithmetic — which step above would you change?

Step 7 — What your feedback can unlock

- If you supply a real fills ledger or paper P&L record for this strategy, a genuine claim-vs-realized comparison becomes computable (currently refused for missing_data).
- If you supply the rule used to select the 93 events, the "selection process undocumented" flag can be resolved and the win rate/CAGR read with a known bias direction instead of "unknown."
- If you can identify or confirm the frozen universe reference (w4nfwu675) as it applies to this strategy, the survivor-bias flag's effect on these specific numbers becomes known rather than assumed.
- If you confirm the actual seal/generation date (or correct the 2026-07-15 embedded in the audit folder name), Step 1's dating becomes confirmed rather than inferred.

Where the files live — click to open

How corrections work

Name a file path or a correction for any item above. The record set is append-only — your correction supersedes the prior value, but the original stays visible for audit. Every version is hashed: the claim record for this strategy is `sha256:3a9d52d6bab32522e79f416d003c7ee3df9c7bb1a22a6bdba5fe31c39e2a965f`, and the realized record is `sha256:fca5b6a93a34d7f106fccf34d471e44489eee8bb76d05cd1959911a177368f2f`.

Appendix A — The Findings Report

This is the study's findings page for this strategy, exactly as produced by the measurement run. Your input review (the pages before this) is about whether the inputs underneath THIS page are right.

Earnings Trader Locked 93 — Inflation Report

The claim

- Status: FOUND
- Stated: Events: 93 | Win rate: 92.47% | CAGR: 419.48% | MaxDD: -4.11% | avg trade +7.77% | profit factor 59.43 (locked-93 selected-events backtest) over 2022-03-31..2026-05-15
- Normalized: 419.5%/yr — method: stated CAGR fraction; note the 93 events are a SELECTED trade set
- Sources: trisight-trader EARNINGS_TRADER_LOCKED_93_CONTRACT.md + STRATEGY_SUMMARY.md, Audits/2026-07-15_earnings_trader_locked_93_5feacc6/PROOF.md
- Verbatim: "Events: 93 | Win rate: 92.473% | CAGR: 419.481%"
- Record: sha256:3a9d52d6bab32522e79f416d003c7ee3df9c7bb1a22a6bdba5fe31c39e2a965f

The realized record

- Status: NOT_FOUND
- Stated: n/a over ???
- Normalized: NOT NORMALIZABLE — method: n/a
- Sources: trisight-trader/docs_output/zero_fill_investigation_20260731/ZERO_FILL_INVESTIGATION_20260731.md
- Verbatim: "no fills ledger, paper P&L file, or physical log exists for this strategy anywhere in the estate"
- Record: sha256:fca5b6a93a34d7f106fccf34d471e44489eee8bb76d05cd1959911a177368f2f

The verdict

REFUSED — missing_data. Earnings Trader Locked 93: claim FOUND, realized NOT_FOUND — no comparison without both sides

A refusal is a finding: this claim cannot currently be checked against reality, which is itself the predecessor system's core defect.

How to refute this page

Open the cited sources; if any excerpt is misquoted or a better claim/realized artifact exists, supply the file path — the record set is append-only and corrections supersede with the prior kept visible.
