Oakwind Swing Trader — Input Review Guide

Prepared for Dick O'Leary · Oakwind strategy estate · August 2026

What this is

We measured what Oakwind Swing Trader's backtest claims against what it actually did in production paper trading. Before you treat any of these results as final, we want you to check every input we used to get there. If you correct anything below, the study re-runs automatically — your correction supersedes, and the original stays visible.

Step 1 — The claim document we used

- File: `Oakwind Swing lockdown/backtest artifact (commit b5ffd4f lineage, generated 2026-05-18T14:33:54)`
- Seal reference: `915248a6, signed Dick O'Leary 2026-07-12T12:55:29Z (Audits/ seal 915248a6 signed Dick O'Leary 2026-07-12T12:55:29Z)`
- Verbatim excerpt: "Win% 67.65%, Net executed win% 62.85%, CAGR 1,851.41%, Max DD -1.65%"

Your review: Is this the right / best statement of what Oakwind Swing Trader claims? If a better or newer claim document exists, name the file path.

☐ Confirmed - [] Correction: _____

Step 2 — The numbers we read from the claim

- Win rate: **67.65%** raw, based on 15,028 trades — this is the headline win rate we used.
- Net executed win rate: **62.85%** raw — win rate after accounting for which signals actually got filled.
- CAGR: **1,851.41%** raw, at 5bps friction — normalized to **1851.4%/yr** per the method note: "stated CAGR fraction; window NOT stated by the source (artifact generated 2026-05-18, no historical span declared) — return dimension will refuse on window."
- Max drawdown: **-1.65%** raw.
- Trade counts: **15,028 trades / 9,408 executed**.
- 15bps friction variant (also stated): win **55.12%**, CAGR **430.61%**.

Your review: one confirm/correct line per metric above — flag any number that looks wrong to you.

Step 3 — The time window of the claim

The claim artifact does **not state** a calendar window (`window_from` / `window_to`: not stated). The artifact was generated 2026-05-18T14:33:54, but that is a generation date, not a backtest span. Because no window is stated, the return-inflation comparison **refuses to run** — there is nothing to annualize against.

Your review: if you know the calendar window the backtest covered, state it — this single input may unlock the return comparison.

☐ Window confirmed as shown - [] Actual window: _____

Step 4 — The realized ledger we used

- File: `supply_demand_hourly_paper_fills.csv`
- How pulled: railway ssh, read-only pull
- Pull date: 2026-08-07
- Row/trade count: 254 closed round-trip trades
- Window: **2026-05-15** to **2026-08-06**

Your review: is this the right ledger? Does a cleaner or more complete record of real fills exist anywhere? Name it if so.

☐ Confirmed - [] Better ledger: _____

Step 5 — The realized numbers and the known problems with them

Verbatim: "254 closed round-trip trades: WR 58.66% (95% CI 52.52%-64.54%) ... expectancy +0.466%/trade." Additional stated figures: payoff **1.680**; a stated aggregate dollar figure exists only for the sub-window 2026-07-27..08-06: **+\$5,865.65**. No integrity flags are recorded on the realized side.

Two integrity flags are recorded on the **claim** side:

1. **"no historical window declared by the claim artifact"** — plain English: the backtest doesn't say what dates it covers. Direction: unknown — could be a favorable stretch, an unfavorable one, or full history; without the window we can't tell, and it's the same gap that blocks Step 3.
2. **"fleet-wide frozen survivor-biased universe; dip-buy amplification (w4nfwu675)"** — plain English: the backtest ran on a fixed set of symbols and includes amplified dip-buy signals. Survivorship bias of this kind generally makes historical performance look better than it would have been in real time, so treat this as a likely upward bias on the claimed numbers — but the slice does not quantify by how much.

Your review: per flag — is our reading right? Do you have context that changes it?

Step 6 — What we computed and what we refused

- **Return inflation: REFUSED (invalid_params).** "Side not normalizable to annualized return (claim: stated CAGR fraction; window NOT stated by the source ... realized: none). A refusal is a finding: this claim cannot be honestly ratioed against reality." Driven by Step 3 — the claim has no stated window, so there's nothing to annualize.
- **Win-rate inflation: 1.15×** — claimed 67.7% vs realized 58.7% over 254 closed trades. Driven by Step 2's claimed win rate (67.65%) against Step 5's realized win rate (58.66%).
- Report caveat: "Claim and realized windows cover DIFFERENT market regimes by nature (backtest history vs 2026 paper) ... Realized samples are short — treat ratios as lower-noise-bound estimates, not precision measurements."

Your review: dispute the input, not the arithmetic — which step above would you change?

Step 7 — What your feedback can unlock

- If you supply the calendar window the backtest covered (Step 3), the return-inflation ratio becomes computable instead of refused.
- If you supply a better or newer claim document (Step 1), the claim-side numbers in Step 2 could be corrected or replaced.
- If you have context on the survivor-biased universe / dip-buy amplification flag (Step 5, flag 2), that reading could be corrected.
- If you know of a cleaner or more complete realized ledger than the paper-fills CSV (Step 4), the realized side could be strengthened.

Where the files live — click to open

Every source this guide cites, with a direct link where one exists. You will need to be signed in to GitHub with your oakwindholdings access for these links to open.

How corrections work

Name a file path or a correction for any item above and send it back — the record set is append-only, so your correction supersedes the current reading while the original stays visible for audit. Every version is hashed. Record hashes for this review: **claim** `sha256:4892e5c5c65abc900adf43e086cad3ac79e59e315356610234505028fe6da3a3`, **realized** `sha256:cfb710325640a9c2e684947027b06fcd4d6874bdba23dc320370deddbf6161bb`, **verdict** `sha256:10df9b911752042ab6c567890cfa6111d07c97d05c51da55830370e43f5c4ae2`.

Appendix A — The Findings Report

This is the study's findings page for this strategy, exactly as produced by the measurement run. Your input review (the pages before this) is about whether the inputs underneath THIS page are right.

Oakwind Swing Trader — Inflation Report

The claim

- Status: FOUND
- Stated: Modeled control ledger, 5bps friction: Win% 67.65%, net executed win% 62.85%, CAGR 1,851.41%, MaxDD -1.65%, 15,028 trades / 9,408 executed (15bps variant: win 55.12%, CAGR 430.61%) (modeled control-ledger backtest) over ???
- Normalized: 1851.4%/yr — method: stated CAGR fraction; window NOT stated by the source (artifact generated 2026-05-18, no historical span declared) — return dimension will refuse on window
- Sources: `Oakwind Swing lockdown/backtest artifact (commit b5ffd4f lineage, generate d 2026-05-18T14:33:54), Audits/ seal 915248a6 signed Dick O'Leary 2026-07-12T12:55:29Z`
- Verbatim: "Win% 67.65%, Net executed win% 62.85%, CAGR 1,851.41%, Max DD -1.65%"
- Record: `sha256:4892e5c5c65abc900adf43e086cad3ac79e59e315356610234505028fe6da3a3`

The realized record

- Status: FOUND
- Stated: 254 closed round-trips on production paper ledger: WR 58.66% [95% CI 52.5%-64.5%], payoff 1.680, expectancy +0.466%/trade; stated aggregate \$ figure exists only for 2026-07-27..08-06 (+\$5,865.65) over 2026-05-15..2026-08-06
- Normalized: NOT NORMALIZABLE — method: n/a
- Sources: `supply_demand_hourly_paper_fills.csv via railway ssh read-only pull 2026-08-07`
- Verbatim: "254 closed round-trip trades: WR 58.66% (95% CI 52.52%-64.54%) ... expectancy +0.466%/trade"
- Record: `sha256:cfb710325640a9c2e684947027b06fcd4d6874bdba23dc320370deddbf6161bb`

The verdict

Return inflation: REFUSED (invalid_params) — Oakwind Swing Trader: side not normalizable to annualized return (claim: stated CAGR fraction; window NOT stated by the source (artifact generated 2026-05-18, no historical span declared) — return dimension will refuse on window; realized: none). A refusal is a finding: this claim cannot be honestly ratioed against reality.

Win-rate inflation: 1.15× — claimed 67.7% vs realized 58.7% over 254 closed trades.

Claim and realized windows cover DIFFERENT market regimes by nature (backtest history vs 2026 paper); rate-vs-rate comparison assumes claim rates were offered as forward-looking. Realized samples are short — treat ratios as lower-noise-bound estimates, not precision measurements.

Method: annualized-return ratio (sides $\geq 60d$) + win-rate ratio (realized $n \geq 30$); normalization per declared per-side methods Record: `sha256:10df9b911752042ab6c567890cfa6111d07c97d05c51da55830370e43f5c4ae2`

How to refute this page

Open the cited sources; if any excerpt is misquoted or a better claim/realized artifact exists, supply the file path — the record set is append-only and corrections supersede with the prior kept visible.
