

START-HERE-DICK

Start Here, Dick — Reviewing the Strategy Study Inputs

Prepared for Dick O'Leary · Oakwind strategy estate · August 2026

Dick — before any conclusion in this study counts, we want you to check the **inputs** we used: which documents we treated as your strategies' official claims, which trade ledgers we treated as reality, and what assumptions we made. You know things we don't. Anything you correct, the study re-runs with your correction, and the original stays visible.

There are **four ways to do this review**. Pick whichever suits you — they all end the same way (your confirmations and corrections on record).

Option 0 — The review website (recommended)

The easiest complete path. Open this address in any browser on your PC:

<https://trisight-engine-production.up.railway.app/review>

Enter the short access code Bob gives you with this link, and you'll see every strategy in a list on the left. Click one, and each input we used appears as its own card with a plain-English question, direct links to the source files, and two buttons: **Confirm** or **Needs correction** with a box for your words. Click **Save this answer** on each card — your answers are recorded instantly, you can stop and come back anytime, and you can revise any answer later (every version is kept). The left-hand list shows your progress per strategy. Nothing to install, nothing to email.

Option 1 — Paper

1. Bob will hand you (or email you) **one printed PDF per strategy** — ten in all. Each is a self-contained packet: the review guide, the findings report, and the full web addresses of every source file, printed out so nothing is hidden.
2. Work through one packet at a time with a pen. Each step has a checkbox: **Confirmed** or **Correction** with a blank to fill in.
3. Give the marked-up packets back to Bob, or photograph the pages and email them to bob@bobstewart.com. That's it.

You never need to touch a computer for Option 1 beyond email.

Option 2 — In your web browser (no installs, nothing to set up)

Everything lives on GitHub, readable in any browser on your PC. One-time setup:

1. Open <https://github.com> and sign in. (Your account owns the `oakwindholdings` organization, so you already have access. If a page says "404", you're either not signed in or signed in with a different account — sign out and back in.)
2. Open the review folder: <https://github.com/oakwindholdings/trisight-engine/tree/main/assay/reports/review>
3. Click any file named `input-review-...` to read a strategy's guide right in the browser. Start with **input-review-oakwind-swing-trader.md** — it's the strategy the study found most likely to be real, and it needs only one input from you (a date range) to unlock its blocked comparison.
4. Every guide ends with a section called **"Where the files live — click to open"** — those are direct links to the exact claim documents and trade ledgers we used. Click them to see the raw source with your own eyes.
5. Send your confirmations/corrections to Bob by email, referencing the step numbers (e.g., "Oakwind Swing, Step 3: the backtest window was Jan 2023 – Apr 2026").

Option 3 — Guided by an AI assistant (if you use ChatGPT or Claude)

If you'd like to be walked through a review interactively — asked one question at a time, in plain English — open ChatGPT or Claude, **attach one strategy's PDF packet** (from the zip Bob sent you), and paste the following:

```
I am a trading strategy owner reviewing an audit of my own strategies. I am not highly technical. I'm attaching a PDF called an "Input Review Guide" for one of my strategies. It walks through every input an audit team used when checking my strategy's claimed performance against its real trading record.
```

```
Your job is to take me through the guide ONE STEP AT A TIME (it has 7 steps).
```

```
For each step:
```

- ```
1. Explain in plain English what the audit team used or assumed, and why it matters.
2. Ask me the specific review question that step poses. Ask one question, then wait for my answer before moving on.
3. Record my answer as either "CONFIRMED" or "CORRECTION: <what I said>".
```

```
Rules: do not skip steps, do not combine steps, do not offer your own opinion of whether my strategy is good, and do not invent any numbers that are not in the attached document. If I say "I don't know," record that as my answer and move on.
```

```
At the end, produce a clean numbered list of all my confirmations and corrections, labeled with the strategy name and step numbers, formatted so I can copy it into the review website or an email exactly as-is.
```

The assistant's final list maps one-to-one onto the review website's cards — type the answers in there, or simply email the list to [bob@bobstewart.com](mailto:bob@bobstewart.com).

---

## What you're actually deciding at each step

---

Every guide has the same seven steps. In plain terms:

| Step | The question you're answering                                                                          |
|------|--------------------------------------------------------------------------------------------------------|
| 1    | Is this the right document to treat as my strategy's official claim?                                   |
| 2    | Did they read the right numbers off it?                                                                |
| 3    | What time period does my backtest actually cover? (Often only you know.)                               |
| 4    | Is this the right record of my strategy's real trades? Is there a better one?                          |
| 5    | The real results, and known problems with the records — is their reading fair?                         |
| 6    | Given steps 1–5, here's what they computed or refused to compute. Which <i>input</i> would you change? |
| 7    | A list of exactly what your answers can unlock.                                                        |

Two words you'll see:

- **REFUSED** — the study would not compute a number because an input was missing or broken. A refusal is not an accusation; it's the study declining to guess. Your feedback can often convert a refusal into a real computation.
- **Integrity flag** — a known problem with a record (for example, corrupted rows in a ledger, or a backtest universe that quietly excluded companies that later failed). Flags are stated so you can challenge or confirm them, not to embarrass anyone.

## The one rule of this review

---

**Dispute the inputs, not the arithmetic.** If a conclusion looks wrong to you, the fix is always upstream: a better claim document, the true window, a cleaner ledger. Name the file — every correction re-runs the study, supersedes the old reading, and keeps the original visible with its fingerprint (hash), so nothing ever silently changes.

## The ten packets
